

## Floor Litterbag Instructions

Thank you for purchasing the HR Express Floor Litterbag.  
To set up, use these easy instructions.

### Contents:

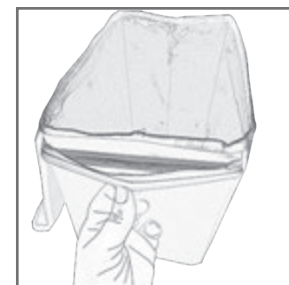

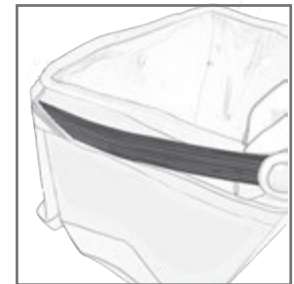

- 1 Floor Litterbag
- 2 plastic stability braces

### Installing braces

First open the floor litterbag.

- Look carefully at the striped webbing handles on each side of the litterbag. The ends of the handles are stitched to create a small slot between the handle and the litterbag. See arrows in diagram.
- Find the 2 plastic braces inside polybag.
- Take one of the plastic braces, with the smaller ridges facing out, insert it firmly into the slot/opening under one end of the strap. The slot/openings are not that deep, so it will only go in a short way.
- Gently bend the brace and insert opposite end into the slot/opening at the other end of the same handle. The brace should be flat against the litterbag's side and fit snugly. This keeps the litterbag's structure. Handles should still be loose enough to pull out for carrying.
- Repeat on the other side.
- Once done, put in car, truck or SUV for a trash-free ride.
